

# CONSTRUCTIVE PROCESS

**Altos los Robles represents some of the highest quality construction in the region. Since the beginning, American architects and engineers have been an integral part of all of the design work and quality control on all construction**

**As you will see, these homes are built of concrete block, concrete, steel, tile, and fiberglass Pella Windows imported from USA. They will be here in good condition in 100 years. There is strict quality control on construction from the first foundations to the last clay tile placed on the roof.**

**In the tropics there are many concerns that we are unaccustomed to in most of North America including earthquakes, intense insect pressure, humidity, air flow, and air conditioning factors. You will see as you get involved how our engineers have overcome many of the typical problems that a lot of existing construction in Costa Rica has, to provide you with a quality, comfortable, long lasting, easily maintainable end product in your new home.**

**Our construction allows you to plan confidently for the inheritance of your grandchildren and great grandchildren.**

**This is a sampling of houses finished by us, all to high standards of quality and finish. We constantly search for a new ideas and improvements to provide the best end product to our clients. of course many clients come with their own innovations and custom finishes which are designed into the home.**

**When you visit our Community, ask to see existing and new homes under construction to appreciate why Altos los Robles is several grades above most competing builders in the region in terms of quality of design, construction, security, and attention to detail.**
